 ASSIGNMENT 1

$$1. \frac{d^2x}{dt^2} + 5\frac{dx}{dt} + 6x = \cos t$$

assuming $\cos t = 0$

$$\frac{d^2x}{dt^2} + 5\frac{dx}{dt} + 6x = 0$$

$$m^2 + 5m + 6 = 0$$

$$m^2 + 3m + 2m + 6 = 0$$

$$m(m+3) + 2(m+3) = 0$$

$$(m+2)(m+3) = 0$$

$$m_1 = -2 \quad \text{or} \quad m_2 = -3$$

Complementary function: $x_c = A e^{-2t} + B e^{-3t}$

Particular Integration

$$f(x) = \cos t \quad x_p = C \cos t + D \sin t$$

$$\frac{dx_p}{dt} = -C \sin t + D \cos t$$

$$\frac{d^2x_p}{dt^2} = -C \cos t + (-D \sin t)$$

$$\therefore -C \cos t - D \sin t + 5(-C \sin t + D \cos t) + 6(C \cos t + D \sin t) = \cos t$$

$$-C \cos t - D \sin t - 5C \sin t + 5D \cos t + 6C \cos t + 6D \sin t$$

$$C \cos t (-C + 5D + 6C) + \sin t (-D - 5C + 6D) = \cos t$$

$$C \cos t (5C + 5D) + \sin t (5D - 5C) = \cos t$$

By comparing coefficients

$$5D + 5C = 1 \quad \dots \dots \quad (1)$$

$$5D - 5C = 0 \quad \dots \dots \quad (2)$$

by adding eq 1 and 2

$$10\Delta = 1$$

$$\Delta = \frac{1}{10}$$

Subs. $\frac{1}{10}$ for Δ in eq 1

$$5D + 5C = 1$$

$$\frac{5}{10} + 5C = 1$$

$$5C = 1 - 0.5$$

$$5C = 0.5$$

$$C = \frac{0.5}{5} = \frac{1}{10}$$

∴ Particular Integration

$$f(t) = \frac{1}{10} \cos t + \frac{1}{10} \sin t$$

General solution = Cf + PI

$$x = Ae^{-2t} + Be^{-3t} + \frac{1}{10} \cos t + \frac{1}{10} \sin t$$

when $t=0, x = 0.1$

$$0.1 = Ae^{-2(0)} + Be^{-3(0)} + \frac{1}{10} \cos 0 + \frac{1}{10} \sin 0$$

$$0.1 = A + B + \frac{1}{10}$$

$$A + B = 0.1 - 0.1$$

$$A + B = 0$$

$$A = -B \quad \dots \text{--- (3)}$$

when $t=0 \frac{dx}{dt} = 0$

$$\frac{dx}{dt} = -2Ae^{-2t} - 3Be^{-3t} - \frac{1}{10} \sin t + \frac{1}{10} \cos t$$

$$0 = -2Ae^{-2(0)} - 3Be^{-3(0)} - \frac{1}{10} \sin 0 + \frac{1}{10} \cos 0$$

$$0 = -2A - 3B + 0.1$$

$$2A + 3B = 0.1 \quad \dots \text{--- (4)}$$

$$A = -B$$

Subs $-B$ for A in eq 4

$$-2B + 3B = 0.1$$

$$B = 0.1$$

$$A = -B$$

$$\therefore A = -0.1$$

Particular Solution

$$x = -0.1 e^{-2t} + 0.1 e^{-3t} + \frac{1}{10} \cos t + \frac{1}{10} \sin t$$

OR

$$x = \frac{-e^{-2t}}{10} + \frac{e^{-3t}}{10} + \frac{1}{10} \cos t + \frac{\sin t}{10}$$
