ENG 362 ASSIGNMENT II

If the maximum percentage absolute error is desired to be $1E-9$, using the Newton - Raphson iteration method and initial guess value of 0.5, find the root of the function given in eqn. (1.1)

a) manually and

b) with the aid of MATLAB

$$F(x) = e^{-0.5x}(4-x) - 2$$

NB.: for the manual solution, use all the values given by the calculator

Soln

a) $f(x) = e^{-0.5x}(4-x) - 2$

$f'(x) =$

let $u = e^{-0.5x}$ & $v = (4-x)$

$du = -0.5e^{-0.5x}$; $dv = -1$

$f'(x) = e^{-0.5x} - 0.5e^{-0.5x}(4-x)$

$x_0 = 0.5$ [initial guess]

General Newton - Raphson's formular

$$x_{n+1} = x_n - \frac{f(x_n)}{f'(x_n)}$$

$f(x_0) = f(0.5) = 0.725827407$

$f'(x_0) = f'(0.5) = -2.141702153$

$$x_1 = x_0 - \frac{f(x_0)}{f'(x_0)} = 0.838890606,$$

$f(x_1) = 0.078144929779$

$f'(x_1) = -1.642200929$

$$x_2 = x_1 - \frac{f(x_1)}{f'(x_1)} = 0.885708802,,$$

$f(x_2) = 7.845 \times 10^{-12}$

$f'(x_2) = -1.642200704$

$$x_3 = x_2 - \frac{f(x_2)}{f'(x_2)} = 0.885708802,,$$
