Output

iter	v	εa
0	0.5	0
1	239.05	99.791
2	294.17	18.736
3	302.61	2.7894
4	303.85	0.40992
5	304.04	0.06044
6	304.06	0.0088222
7	304.07	0.001294
8	304.07	0.00018981
9	304.07	2.7842e ⁻⁰⁵

10	304.07	$4.0838e^{-06}$
11	304.07	$8.7265e^{-08}$
12	304.07	$1.2884e^{-08}$
12	304.07	$1.8904e^{-09}$
14	304.07	$2.7727e^{-10}$
15	304.07	$4.0679e^{-11}$
16	304.07	$5.9635e^{-12}$

converging at iter = 7 ; $V = 304.07$

proce

$$F_D = \frac{0.3V^2}{500 + (mV)^3} = 0.02V$$

if $V = 304.07$

$$\text{recall } F_D = 9.8 \times 3.5 = 34.30$$

Substituting $V = 304.07$

$$F_D = \frac{0.3 \times (304.07)^2}{500 + (17(304.07))^3} = 0.02(304.07)$$

$$F_D = 40.38195931 - 6.00514$$

$$F_D = 34.311$$
