COLLEGE: MHS
DEPARTMENT: MBBS
MATRIC NUMBER: 19/MHS01/337

1. The equation of a line is expressed $y = mx + c$, has a gradient m, $y = m_1x + c_1$ and $y = m_2x + c_2$ are perpendicular if $m_1m_2 = -1$

$y - 3x - 2 = 0$ and $3y + x + 9 = 0$

$y = 3x + 2$ and $3y = -x - 9$

$m_1 = 3$ $\quad y = -1x/3$

$m_2 = -1/3$

$m_1 \cdot m_2 = 3 \times -1/3$

$m_1 \cdot m_2 = -1$ ∴ The two lines are perpendicular

2. $3y - 4 = 2x + 3$ and $y - 5 = x + 6$

$3y = 2x + 7$ and $y = x + 11$

$y = 2/3x + 7/3$ and $y = x + 11$

$m_1 = 2/3$ and $m_2 = 1$

$m_1 \cdot m_2 = 2/3 \times 1$

$= 2/3$ ∴ therefore the two aren't perpendicular

3. $x^2 + y^2 + 3xy - 11 = 0$ Find dy/dx $(1, 2)$

$x^2 + y^2 + 3xy = 0$

$2x + 2y\, dy/dx + 3[x\, dy/dx + y] = 0$

$2x + 2y\, dy/dx + 3[x\, dy/dx + y] = 0$

$2x + 2y\, dy/dx + 3x\, dy/dx + 3y$

$dy/dx [2y + 3x] = -3y - 2x$

$dy/dx = \frac{-3y - 2x}{2y + 3x}$

Equation of the tangent

$dy/dx = \frac{-3y - 2x}{2y + 3x}$

$$m = \frac{-3y - 2x}{2y + 3x}$$

$$m = \frac{-3(2) - 2(1)}{2(2) + 3(1)}$$

$$m = \frac{-6 - 2}{4 + 3} = -8/7$$

$$y - y_1 = m(x - x_1)$$

$$y - 2 = -8/7(x - 1)$$

$$7(y - 2) = -8(x - 1)$$

$$7y - 14 = -8x + 8$$

$7y + 8x - 22 = 0$ (equation of tangent)

$$y - y_2 = 1/m_1 (x - x_1)$$

$$y - 2 = -1 \div -8/7 (x - 1)$$

$$y - 2 = 7/8 (x - 1)$$

$$8y - 16 = 7(x - 1)$$

$$8y - 16 = 7x - 7$$

$8y - 7x - 9 = 0$ (Equation of the normal)
