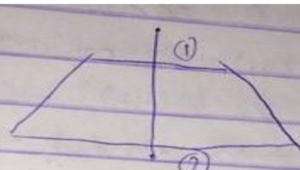
1.



let the smaller end be represented by ①
The larger end be represented by ②
Solution

$l = 2.0m$ $\quad P_1/\rho g = 2.5m$
$V_1 = 5m/s$ $\quad V_2 = 2m/s$

Loss of head $= h_L = \dfrac{0.35(V_1 - V_2)^2}{2g} = \dfrac{0.35(5 \cdot 2)^2}{2g} = \dfrac{0.35(\times 3)^2}{2 \times 9.81}$

$= \dfrac{0.35(a)}{2 \times 9.81}$

pressure head $= P_2/\rho g = ?cm$

Applying Bernoulli's eq at ① & ②

$P_1/\rho g + V_1^2/2g + z_1 = P/\rho g + V_2^2/2g + Z_2 + hL$

$Z_2 = 0, z_1 = 2.0$

$\therefore 2.5 + (5)^2 + 2.0 = P_2/\rho g + \dfrac{(3)^2}{2 \times 7.81} + 0.016$

$2.5 + 1.27 + 2.0 = P^2/\rho g + 0.203 + 0.16$

$P^2/\rho g = (2.5 + 1.27 + 2.0)$
