$$y = y_0 e^{kt}$$

$$y = 3y_0; \frac{y}{y_0} = 3$$

$$A = \frac{y}{y_0} = e^{kt} = 3 \text{ at } t = 9$$

$$A = \therefore 3 = e^{kt}$$

$$\ln 3 = kt$$

$$\ln 3 = 9k$$

$$k = \frac{\ln 3}{9}$$

$$k = 0.122$$

$$B = \frac{y}{y_0} = e^{kt} = 9 \text{ at } t = 18$$

$$B = \therefore 9 = e^{kt}$$

$$\ln 9 = 18k$$

$$\frac{\ln 9}{18} = k$$

$$k = 0.122$$

$$\therefore A = y_0 = 50 \dots (i)$$

$$B = y_0 = 150 \dots (ii)$$

$$\therefore y = 50e^{kt} \dots (iii)$$

$$y = 150e^{kt} \dots (iv)$$

$$\therefore y = 50e^{0.122t} \dots A$$

$$\therefore y = 150e^{0.122t} \dots B$$
