$$y = y_0 e^{kt}$$

$$\frac{y}{y_0} = e^{kt}$$

$$\therefore \frac{y}{y_0} = e^{kt} = 3 \quad \text{at } t = 9$$

$$\frac{y}{y_0} = e^{kt} = 9 \quad \text{at } t = 18$$

$$\therefore y_0 = 50 - i$$

$$y_0 = 150 - ii$$

$$y = 50 e^{kt} - ii$$

$$y = 150 e^{kt} - iu$$

$$3 = e^{kt} \quad \left. \begin{array}{l} 9 = e^{kt} \end{array} \right\} 9 = e^{kt}$$

$$\ln 3 = \ln e^{kt} \quad \left. \begin{array}{l} \ln 9 = \ln e^{kt} \end{array} \right\} \ln 9 = \ln e^{kt}$$

$$\ln 3 = kt \quad \left. \begin{array}{l} \ln 9 = kt \end{array} \right\} \ln 9 = kt$$

$$k = \frac{\ln 3}{9} \quad \left. \begin{array}{l} k = \frac{\ln 9}{18} \end{array} \right\} k = \frac{\ln 9}{18}$$

$$k = 0.122$$

$$\therefore y = 50 e^{0.122t}$$

$$y = 150 e^{0.122t}$$

$$y = 150 e^{0.122t} \quad \left. \begin{array}{l} y = 150 e^{0.122t} \end{array} \right\} y = 150 e^{0.122t}$$
