

NAME: OWOLABI AYODEJI DANIEL

MEDICINE AND SURGERY
(MBBS)

MATRIC NUMBER: 19/MH501/368

SUBJECT: CHEMISTRY 102

1) IUPAC NAMES OF THE FOLLOWING ORGANIC COMPOUNDS:

- | | | IUPAC NAME |
|--|---|--------------------|
| i) CH_3OCH_3 | $\begin{array}{c} \text{H} & \text{H} \\ & \\ \text{C} - \text{O} - \text{C} - \text{H} \\ & \\ \text{H} & \text{H} \end{array}$ | methoxymethane |
| ii) $\text{CH}_3\text{CH}_2\text{OCH}_2\text{CH}_3$ | | ethoxyethane |
| iii) $\text{CH}_3\text{CH}_2\text{OCH}_3$ | $\begin{array}{c} \text{H} & \text{H} \\ & \\ \text{H} - \text{C} - \text{C} - \text{O} - \text{C} - \text{H} \\ & & \\ \text{H} & \text{H} & \text{H} \end{array}$ | methoxyethane |
| iv) $\text{CH}_3\text{CH}_2\text{CH}_2\text{OCH}_2\text{CH}_3$ | | ethyl propyl ether |
- (5)

PROPERTIES OF ETHERS

- 2) Ether molecules cannot form hydrogen bonds with each other, resulting in relatively low boiling points compared to those of analogous alcohols.
- i) Ethers are slightly polar - Many of the chemical properties of these compounds arise because of polarization of the carbonyl group which results in the molecule being susceptible to a flask by nucleophilic reagents.
- ii) The lower ethers are highly volatile and flammable
- iv) Ethers are good organic solvents
- v) Lower ethers also act as anaesthetics.

3) METHODS OF PREPARING ETHERS

- 1) Dehydration of Alcohols - This direct nucleophilic substitution reaction requires elevated temperatures (about 125°C). The reaction is catalyzed by acids, usually sulfuric acid. Elimination reactions compete with dehydration of alcohol: $\text{R}-\text{CH}_2-\text{CH}_2(\text{OH}) \rightarrow \text{R}-\text{CH}=\text{CH}_2 + \text{H}_2\text{O}$
The dehydration of alcohols afford ethers
 $2\text{R}-\text{OH} \rightarrow \text{R}-\text{O}-\text{R} + \text{H}_2\text{O}$ at high temperature

2) Williamson ether synthesis

nucleophilic displacement of alkyl halides by alkoxides
 $\text{R}-\text{O}^-\text{Na} + \text{R}'-\text{X} \rightarrow \text{R}-\text{O}-\text{R}' + \text{NaX}$

It involves treatment of a parent alcohol with a strong base to form the alkoxide, followed by addition of an appropriate aliphatic compound bearing a suitable leaving group (R-X).

USES OF ETHYLENE OXIDE

- i) ethylene oxide has been used for over 60 years for both insecticidal treatments (pesticides and fumigants) and for sterilization of food stuff.
- ii) ethylene oxide is used to make antifreeze, adhesives.
- iii) ethylene oxide is used in the production of detergents and polyester.
