Coronaviruses, Effects of the Lockdown and Restriction of Movement on Nigerians.

We are going through tough times as a nation, fear rampaging the minds of every citizen, restriction of movement which no one is use to and new coronavirus cases everyday. This article is written by me, Rovaiye Oluwabukunmi Ifedamala to expose and create public awareness that ^{the ongoing} coronavirus pandemic is ^{the} nothing to fear and ~~feel~~ the negative effects of lockdown and restriction of movement among Nigerians.

Coronavirus disease (COVID-19) is an infectious disease caused by a newly discovered coronavirus that attacks ~~both~~ the lungs and kills its victims by drowning due to the immune system overreacting and leading to the filling of the lungs with water. This is why a ventilator is needed to suck all liquid from the lungs, this is only in severe cases. In mild cases, most people who fall sick with COVID-19 will experience mild to moderate symptoms and ~~feels~~ such as coughing (dry), sore throat, fatigue, joint pain etc and recover without special treatment.

The restriction of movement during this lockdown period ^{in Nigeria} has a major negative effect which is starvation of the minors. The minors in the sense that, people who cannot afford a three-square meal on a regular pandemic free day. These people are stranded in their homes awaiting a miracle that is

is not coming their way. The federal government has noticed this and has come up with a way of getting them food, by sharing in central areas of localities. This does not seem to be working, only causing stampedes and roadiness, while those who truly need the food are left without anything and asked to leave, - truly said. It is now a national threat that if the problem of feeding isn't not tackled, we as a nation Nigeria could have more deaths than starvation rather than the ongoing pandemic, Coronavirus (COVID-19).

The citizens of Nigeria should rather obey the restrictions than disregard it, so we can tackle this pandemic as quick as possible
