1. The IPO system here is required to take the current day of the week as well as the total price of the customers purchase. It then performs a comparative process on the input to check the customer is entitled to a discount. The output would be given based on the process, telling the customer if he is entitled to a discount or not.

2. 1. )Start

2. )Input date, price

3. )If date! =Sunday

4. )if price>=#5000

5. )display "discount viable"

6. )else

7. )

display "discount not viable"

8. )else

9. ) display 'discount not viable'
