

Solution to Question 1

```
#include <stdio.h>

#include <stdlib.h>

int main()

{

    int days, years, weeks;

    days= 1343;

    years=days/365;

    weeks= (days % 365)/7;

    days= days-((years*365)+(weeks*7));

    printf("%dYears",years);

    printf(" , %dweeks",weeks);

    printf(" and %ddays",days);

    return 0;

}
```

Solution to Question 1 Output

The screenshot shows a code editor window titled "LockdownAssignment1.c - Code::Blocks 17.12". The code is the same as shown in the previous block. The output window shows the following text:

```
3Years, 35weeks and 3days
Process returned 0 (0x0)   execution time : 0.036 s
Press any key to continue.
```

Solution to Question 2

```
#include <stdio.h>

#include <stdlib.h>

int main()

{
    float x1, x2, y1, y2, distance, x,y;

    printf("Enter x1:\n");

    scanf("%f",&x1);

    printf("enter x2:\n");

    scanf("%f", &x2);

    printf("Enter y1:\n");

    scanf("%f",&y1);

    printf("Enter y2:\n");

    scanf("%f",&y2);

    x=(x2-x1);

    y = (y2-y1);

    distance = sqrt((x*x)+(y*y));

    printf("The distance between points is:%0.2f",distance);

return 0;

}
```

Solution to Question 2 Output

The image shows a screenshot of a C++ IDE (Code::Blocks) with a source code editor and a console window. The source code in the editor is as follows:

```
1 #include <stdio.h>
2 #include <stdlib.h>
3
4 int main()
5 {
6     int x1;
7     float x2;
8     print
9     scanf
10    print
11    scanf
12    print
13    scanf
14    print
15    scanf
16    x = (x
17    y = (
18    dista
19    print
20
21    return 0;
22 }
23
```

The console window shows the following output:

```
"C:\Users\DAYO\Desktop\C Programming\LockdownAssignment2.exe"
Enter x1:
1
Enter x2:
4
print
scanf
Enter y1:
7
print
scanf
Enter y2:
9
print
The distance between points is:3.61
scanf
Process returned 0 (0x0)   execution time : 5.991 s
print
press any key to continue.
```

The IDE interface includes a menu bar (File, Edit, View, Search, Project, Build, Debug, Fortran, wxSmith, Tools, Tools+, Plugins, DoxyBlocks, Settings, Help), a toolbar, and a status bar at the bottom showing the file path, language (C/C++), and system information (4:37 pm, 26/04/2020).

Solution to Question 3

```
#include<stdio.h>

#include<stdlib.h>

int main()

{

float A, B, C, Perimeter;

printf("Enter the first side:");

scanf("%f",&A);

printf("Enter the second side:");

scanf("%f",&B);

printf("Enter the third side:");

scanf("%f",&C);

if((B+C)>A && (A+C)>B && (B+A)>C)

{

    Perimeter= A+B+C;

    printf(" The perimeter is %.2f",Perimeter);

}

else

{

    printf("Values cannot create a triangle!");

}

return 0;

}
```

Solution to Question 3 Output

The screenshot shows a code editor window titled "lockdown assignment3.c - Code::Blocks 17.12". The editor displays the following C code:

```
1 #include<stdio.h>
2 #include<stdlib.h>
3
4 int main()
5 {
6     float A, B, C, P;
7     printf("Enter the first side:");
8     scanf("%f",&A);
9     printf("Enter the second side:");
10    scanf("%f",&B);
11    printf("Enter the third side:");
12    scanf("%f",&C);
13    if((B+C)>A && (A+C)>B && (A+B)>C)
14    {
15        P = A+B+C;
16        printf("The perimeter is %.2f\n",P);
17    }
18    else
19    {
20        printf("Values are not valid\n");
21    }
22    return 0;
23 }
24
25
26
```

The output window shows the execution of the program with the following text:

```
Enter the first side:3
Enter the second side:4
Enter the third side:5
The perimeter is 12.00
Process returned 0 (0x0)   execution time : 5.749 s
Press any key to continue.
```

The Windows taskbar at the bottom shows the system tray with the date and time: 4:43 pm, 26/04/2020.

Solution to Question 4

```
#include<stdio.h>
#include<stdlib.h>
int main()
{
    int age;
    int cnt_baby =0;
    int cnt_school =0;
    int cnt_adult=0;
    int count=0;
    while(count<20)
    {
        printf("enter age of person[%d]:", count+1);
        scanf("%d",&age);
        if(age>=0 && age<=4)
            cnt_baby++;
        else if(age>4 && age<=17)
            cnt_school++;
        else
            cnt_adult++;
        count++;
    }
    printf("Baby age= %d\n",cnt_baby);
    printf("School age= %d\n", cnt_school) ;
    printf("Adult age= %d\n", cnt_adult);
    return 0;
}
```

}

if (count==6)

{

    printf("\nYou have one more attempt.");

}

if (count==7)

{

    printf("\n\n### You have used all your attempts, better luck next time");

    break;
```

```

}

}

printf("\n\nThe Random generated number was:%d",random_genNo);

return 0;

}

```

Solution to Question 5 Output

The screenshot shows the Code::Blocks IDE with a C program open. The program's output is displayed in a terminal window, showing a random number generated (85) and several incorrect guesses (12, 34, 56, 78, 90, 98, 76) with feedback messages. The program ends with a congratulatory message and the generated number.

```

C:\Users\DAVO\Desktop\C Programming\Assignment 5\main.exe
Guess a number from(1 to 100):12
The entered number is less than the generated number.
Guess a number from(1 to 100):34
The entered number is less than the generated number.
Guess a number from(1 to 100):56
The entered number is less than the generated number.
Guess a number from(1 to 100):78
The entered number is less than the generated number.
Guess a number from(1 to 100):90
The entered number is greater than the generated number.
Guess a number from(1 to 100):98
The entered number is greater than the generated number.
You have one more attempt.
Guess a number from(1 to 100):76
The entered number is less than the generated number.
The Random generated number was:85
Process returned 0 (0x0)   execution time : 9.570 s
Press any key to continue.

```
