Date: 25/03/2003

Executive Summary/ Project Description

This business plan examines the feasibility of and indeed economic viability of the development of a 600hectares cocoa plantation and the establishment of cocoa liquor extraction plant in SWOF NIGERIA Limited. The farm will produce about 2,500tonnes of cocoa beans in a production cycle. The cocoa liquor extraction plant will process about 4,200tonnes of cocoa beans into edible chocolate liqueur, chocolate cake for livestock industry, cocoa butter for cosmetics, soap, and garden fertilizer industry. There is high domestic demand for these products because of our huge population and production constraints leading to shortage of the commodity. Production is currently popular in the southern part of Nigerian due to their good soil with Ondo, Ogun, Osun, Oyo and Ekiti as the lead producers. Nigeria imports significant quantity of cocoa beans and its derivatives to augment domestic shortages.

The proposed project will create economic opportunities, impact positively on the people and help conserve scarce foreign exchange. The entire cocoa to be processed will be sourced locally through direct production, contract farming in Ekiti State and direct purchase from smallholder farmers in other production areas. The project will create market access, improve income of farmers and contribute significantly to food security. It will also generate satisfactory returns for sponsors and investors.

Sponsorship

The project is sponsored by MRS OGUNDIJO LYDIA, a legal luminary and founder of

Elizade University, Ondo state. MRS OGUNDIJO is promoting the productivity of smallholder farmers in Ondo state through the SWOF Limited. The University has a Department of Agriculture and experts with many years of experience in the project being proposed. Victory Agribusiness Ventures & Consultancy will be responsible for the management consultancy of the projects.

Management

The management will comprise of a democratically elected Board of Directors at the apex of the organization structure. This will be made up of shareholders and member of the cooperative who have stake in the survival, growth and profitability of the business as well as distinguished agribusiness professionals of proven integrity and vast experience in the project area. The prime objective of the board will be to give strategic directions and policies that will ensure long term success of the organization. The board will ensure that the organization complied with all standards set by regulatory authorities.

The Managing Director/President shall be responsible for the co-ordination of the day to day management of the cooperative business. He is accountable to the Board of Directors; he will mobilize organization resources to achieve set goals. He will manage business risks and focus on wealth creation.

Technical Partners

The university has working relationship with OLAM International through an executed MOU. OLAM has mandate in Cocoa beans production and processing and will provide technical assistance in this regard. The business also have a relationship with BOA (Bank of Agriculture) and we are collaborating on MR EBUBE Annual Agric Expo where the founder appreciate Ondo Farmers through monetary award to the best 3farmers in each local government area of the 12 L.G.A in OYO STATE and the overall best farmer in the state. Bank of Agriculture has agreed to finance production of the 400hectares of cocoa through a loan at 9% interest rate (anchor borrowers scheme) given to the cooperative

Market and Sales

Market orientation: domestic; South West & South East, Nigeria

Market Share: 6% niche market in South West, South East Nigeria

Users of Products: edible chocolate liquor for human, cocoa chocolate cake for the livestock industry, cocoa for fertilizer and cocoa butter industries in South East.

Government Support and RegulationTechnical Feasibility

The projects (production of cocoa beans and coca liquor extraction) are technically feasible. In terms of technology, which involve the crushing of cocoa bean seed and extraction of liquor, the industrial processes are simple and a specialist in liquor extraction with more than 10 years experience is part of our team. The needed equipment for liquor extraction are readily available and our experts have hand on experience in the usage and maintenance of the equipment.

On the cocoabean production, we have specialists in mechanization, irrigation, farm management, crop production, weed science, market development, agric extension and accounting as part of our management team. We also have specialists in quality control as part of our management team. The state of infrastructure around the farm in Osun is adequate and suitable for the location of the farm/firm for efficient production, processing and marketing. Raw materials will be produced and sourced locally. The major competitors in the South West are GRAND CEREALS and JOF with the Grand cocoa liquor brand and Executive Chef brand. Grand Cereal has an installed capacity of 1,150tonnes per day in Lagos and 2000tonnes per day in Osun While JOF has a capacity of 120tonnes per day in Akure, SWOF farms will target a market niche and penetrate through cooperative societies to make our brand popular. From our analysis, integration of production and processing will give us a competitive advantage.

We are implementing our project using best international practices, sustainable production and due consideration for the environment. Although some degree of

deforestation will occur, the EIA(Environmental Impact Assessment) report shows little or no damage to the environment as it relates to the issue of climate change. Organic fertilizer will be substituted for chemical fertilizer within three years of farm operations.

The project conform with the economic diversification objective of the government. It also supports foreign exchange and import reduction conservation of government. It creates economic opportunities, market access, improved income for farmers and support food security objective of government. The project will benefit from government intervention fund in the agriculture sector. The project will also benefit from the favourable policy of zero duty for agricultural and equipment import. Restriction of forex for all food products will also widen market opportunity. The project will contribute significantly to employment, output increase, stable price and stable exchange rate.

Project Timeline

The project will be completed within 6months preferably between November, 2014 to April, 2015ecause land clearing is mostly done in the dry season.

A] Land Clearing

| Activity | QTY | N | K |
