

NOISE

Sources of noise

1.)

1. Household sources eg. Blender, washing machine, air conditioner
2. Social events es sources eg. Places of worship, discos and gigs wedding parties and many more
3. Transportation sources eg. Aero planes ,cars and trucks passing by
4. Commercial and industrial sources eg. New sites in the area where they use mixing machines and have workers making noises, generator sounds from barbing saloons and even small branches of some printing press

2.)

Water works

My class went for an excursion at water works in ado -Ekiti, Ekiti state. We learnt a lot but the noise from the spillway to the noise from the machines they use for purification were really loud. I personally had a headache from visiting which makes it obvious that the environment and the noise there is detrimental to health.
