ENGT 282 quiz 18/ENGT 04/072

① $\frac{dy}{dt} = 50(1 + \sin t) - 25\% y$

$$\frac{dy}{dt} = 50(1 + \sin t) - 0.25y$$

$$\frac{dy}{dt} + 0.25y = 50(1 + \sin t)$$

multiply both sides by dt .

$$\left(\frac{dy}{dt} + 0.25y\right) \times dt = 50(1 + \sin t) dt$$

$$1 + 0.25y dy = 50(1 + \sin t) dt$$

$$\frac{dy}{dt} = 50(1 + \sin t) - 0.25y$$

$$\frac{dy}{dt} + 0.25y = 50(1 + \sin t)$$

by applying linear equation method

$$\frac{dy}{dx} + P_y = Q$$

$$P = 0.25, Q = 50(1 + \sin t)$$

$$\int P \cdot dt = 0.25t$$

$$I.F = e^{0.25t}$$

$$I.F = e^{0.25t}$$

$$y \cdot I.F = \int Q \cdot I.F \cdot dt$$

$$y e^{0.25t} = \int 50(1 + \sin t) e^{0.25t} dt$$

$$y e^{0.25t} = 50 \frac{e^{0.25t}}{0.25} + \int e^{0.25t} \sin t dt$$

Integrating by part

$$\int y \cdot dV = yV - \int V dy$$

$$\int e^{0.025t} \sin t \cdot dt$$

$$y = e^{0.025t} \quad dy = 0.025 e^{0.025t}$$

$$V = \cos t$$

$$\therefore \int e^{0.025t} \sin t \cdot e^{0.025t} = -\cos t - \int -\cos t \cdot e^{0.025t}$$

$$0.025 e^{0.025t}$$

$$\int e^{0.025t} \sin t = -e^{0.025t} \cos t + \int -\cos t \cdot e^{0.025t} dt$$

using integration by part

$$y = e^{0.025t} \quad dV = \cos t$$

$$dy = 0.025 e^{0.025t} \quad V = \sin t$$

$$yV = e^{0.025t} \sin t + 0.025 \int e^{0.025t} \sin t dt$$

$$\int \sin t \cdot e^{0.025t} dt$$

$$\text{Let } Q = \int e^{0.025t} \sin t$$

$$Q = -e^{0.025t} \cos t + 0.025 \int e^{0.025t} \sin t dt$$

$$Q = -e^{0.025t} \cos t + 0.025 \int e^{0.025t} \sin t dt - 6.25^{-4}$$

$$Q + 6.25^{-4} = -e^{0.025t} \cos t + 0.025 \int e^{0.025t} \sin t dt$$

$$1.000625 Q = -e^{0.025t} \cos t + 0.025 \int e^{0.025t} \sin t dt$$

$$Q = \frac{-e^{0.025t} \cos t + 0.025 \int e^{0.025t} \sin t dt}{1.000625}$$

$$\int e^{0.025t} \sin t = \frac{-e^{0.025t} \cos t + 0.025 \int e^{0.025t} \sin t dt}{1.000625}$$

$$y e^{0.025t} = 2000 e^{0.025t} - 50 \frac{e^{0.025t}}{1.000625} (\cos t - 0.025 \int e^{0.025t} \sin t dt) + 50 C$$

$$y = \frac{2000 - 50}{1.000625} (\cos t - 0.025 \int e^{0.025t} \sin t dt) + \frac{50 C}{e^{0.025t}}$$

$$Q = -e^{0.025t}$$

Surge

$$y \leq 2000 - \frac{50}{1000000} (155t - 6.025 \sin t) +$$

$$\frac{50C}{c_{\text{post}}}$$

When $y \leq 150$, $t \leq 0$

$$150 \leq 2000 - \frac{50}{1.000000} (1) + 50C$$

$$150 \leq 2000 - 49.968(1) + 50C$$

$$150 \leq 1950.032 + 50C$$

$$-1800.032 = 50C$$

$$C \leq -36.00064$$
