1a). $dy/dt = y_m - y_{out}$.

1b). Solve using IF

$dy/dx + Py = Q$

$P = 1/40$ $Q = 50(1+\sin t)$

$IF = e^{\int P dt}$, $\int P dt = \int 1/40 dt = t/40$

$IF\ e^{t/40}$

$m \cdot IF = \int Q \cdot IF\, dt$.

$me^{t/40} = \int 50 e^{t/40}(1+\sin t)\, dt$ —

Solving RHS

$50\int e^{t/40}(1+\sin t)\, dt$ —.

Let $t/40 = v$, $t = 40v$

$dv/dt = 1/t$

$dt = 40\, dv$

$\therefore 2000\int e^{u}(1+\sin 40u)\, du$

Integrate by parts.

$\int u\, dv = uv - \int v\, du$

Let $u = \sin 40u$, $dv = e^u$

$du = 40\cos 40u$, $v = e^u$

$= 2000(e^u(\sin 40u + 1) - (40e^u(\cos 40u - du)$

Integrating by parts

$\int u\, dv = uv - \int v\, du$

u	dv
$\cos 4$	e^u
$-40\sin 40$	e^u
$-1600\cos 40$	e^u
	e^u

$= e^u \cos 40u - (-40e^u \sin 40u - \int -1600 e^u (\cos 40u)$

$= e^u \cos 40u - (-40e^u \sin 40u + 1600\int e^u \cos 40u)$.

$= \dfrac{40e^u \sin 40u + e^u \cos 40u}{1601}$

$$\int e^u \cos 40u \, du \cdot du$$

$$= 2000\left[e^u(\sin 40u + 1) - 40\left(\frac{40e^u \sin 40u + e^u \cos 40u}{1601}\right)\right.$$

$$= 2000e^u(\sin 40u + 1) - 80000\left(40e^u \sin 40u + e^u \cos 40u\right)$$

Recall $u = t/40$

$$= 2000e^{t/40}(\sin t + 1) - 80000\left(40e^{t/40}\sin t + e^{t/40}\cos t\right).$$

$$= 2000e^{t/40}\left[(\sin t + 1 - 40\left(\frac{40\sin t + \cos t}{1601}\right)\right.$$

$$2000e^{t/40}\left[(\sin t + 1) - \frac{160\sin t - 40\cos t}{1601}\right)$$

$$2000e^{t/40}\left[\sin t + 1\right) \frac{160\sin t - 40\cos t)t}{1601}$$

$$2000e^{t/40}\left(\frac{160\sin t - 160\sin t - 40\cos t + 1601}{1601}\right)$$

$$\frac{2000e^{t/40}}{1601} \times (\sin t - 40\cos t + 1601)$$

$$= n(t)\left(\frac{2000}{1601}(\sin t - 40\cos t + 1601 \neq \left(\frac{1800.05}{e^{t/40}}\right)\right) 16$$
