

The following listed below include the production/service opportunities during the COVID-19 pandemic

1, Softwares and applications for online interaction/video conferencing:

People have been made to stay indoors to reduce the spread of the virus, lockdowns have been put in place. Only essential personnel have been allowed to go out and continue working. People are mad to work from homes, students have to start having online classes, governments officials have to conduct their meetings via video conferencing. To be able to conduct all these meetings and online classes they have to download softwares and applications to help them enforce this properly.

So applications and softwares are now created to ensure the smooth sailing of the meetings and online classes to ensure the proper conduct of businesses and schools.

2, Door step delivery services:

The door step delivery is the best way to for people to buy necessary items and get it delivered to them, since people are on lockdown and can't go out to purchase these necessary items they need during this lockdown. These items include food, toiletries etc businesses who make door step deliveries services have been more demanded for. Some of these businesses who involve in the door step delivery service of sell these products to its customers at lower prices and when they do this more people will patronise them thereby increasing the level of sales made which will help them generate money faster and also help in selling their product at a fast rate.

3, Telecommunication services:

For me telecommunications services are one of most essential services during this pandemic. Organizations, including businesses, government agencies, Schools and religious bodies, have been forced to modify the way they operate in order to simultaneously keep their employees and students safe and ensure that their operations do not grind to a halt during the pandemic, even to be able to place orders to home delivery stores, connect with loved ones etc all require data and airtime. So basically everyone in the country is going to be purchasing. These telecommunication companies have even made it easier for people by giving free airtime, free data plans and by reducing call rates to people who make use of their products to make things easier for people.

4, Detergents and disinfectant production services:

It was advised by medical professionals for everyone to wash our hands regularly and also keeping our personal items and clothings very clean during this pandemic because it will help reduce the chances of infection. So because of this the demand of soaps, hand sanitizers, detergents is very very high. This will also increase the sale of these items and products.

5, Hospital/ clinical services:

During this pandemic period doctors, nurses, ambulance/ paramedics have been the ones who have been at the forefront fighting this disease. The doctors and nurses are the ones who administer drugs/medications to the infected patients to try and help them recover. The paramedics are the ones who go to evacuate the infected patients from their homes and take them to isolation centers from their homes. So their is a need for more people to even volunteer their services in the fight against the virus as the is a global pandemic and hospitals need as much help as they can get.

6, Face masks and medical supplies:

Everyone has been advised and instructed to wear face masks, in some places it has been made compulsory since the virus is easily spread through droplets from an infected person. The sales of these face masks and the sales of medicines have increased so much during this period. People are generally looking for medicines for cold, cough and flu, as expected, due to the virus' fears. Also online purchases of the face masks and medicines have increased very much during this period. This will also help online stores selling pharmaceutical products to have an increase in sales during this period.

7, Exercise/ workouts equipments services :

People have been advised and made by medical professionals that during this pandemic to always try to workout and exercise regularly, as exercise helps to boost the immune and respiratory system. This is where the virus attacks, so exercise will help reduce the risk of infection. So the demand for workout and exercise equipments will be demanded for on a high level.
