EUSTELE

EUSTELE: Vascular bundles are discrete, concentric collateral bundles of xylem and phloem.

ATACTOSTELE

ATACTOSTELE: The vascular bundles are scattered. The nature of the vascular supply to leaves is also note worthy element of the vascular system.

SIPHONOSTELE

SIPHONOSTELE: More advanced vascular systems. E.g. stems of ferns and higher vascular plants, the stele is a cylinder enclosing a parenchymatous pith.

DICTYOSTELE: Vascular supply to leaves is associated with leaf gaps and the conducting cylinder is the dissected one.
