① Success factors in Project management

- Quality:-
- Scope of work
- time
- cost
- Schedule
- Risk factor

② Managerial Economist realization of organizational goals require good strategy and energy to be successfully achieved. Because every good thing requires planning to have a successful achievement there must be a certain plan put in place and how to run it strategically (experts in each of the different fields required to run the project will have to come together and energy is utilized because what good is a plan that is not worked on so after the strategy has been planned out it requires hard work which is the energy invested. This two together is what can make an operation successful
