iii. Internet addiction

iv. Theft of Personal Information

v. Children access

②

8)

Si HTML:- helps to format text as titles and heading, to arrange graphics on a webpage, to link to different page within a website, and to link to different website

iii CSS:- This allow you to apply consistent styling of element across all pages on your site, so that all heading, list, and paragraph's look and feel the same on every page site.

iii

①

4) A static website content are not expected to change frequently while dynamic website dose change frequently.
