Corona Virus also known as COVID-19 is a deadly disease with "CO" meaning Corona, "VI" meaning Virus and "D" meaning Disease with the number 19 because it was first discovered in the human body on the 31st of December, 2019. It is said to have first been found in animal before it first spread to the human body since it first recorded case in the human body it has spread rapidly across the globe.

The Corona Virus symptoms manifest between two to fourteen days of incubation. The symptoms consist of fever, sore throat, these symptoms include sneezing, coughing and difficulty in respiration. Death is likely to be avoided if the case is treated quickly without hesitation, because there is no cure for the virus yet.

This deadly virus could be transferred from an infected person to a non-infected person easily through physical contact, touching surfaces or things on the infected person has been in contact with, coming in contact with body fluids of an infected person. It could also be transferred from animal to human beings by eating under cooked meat of an infected animal.

Washing of hands over running water and soap for 20 seconds and the use of alcohol based hand sanitizers are primary measures to take to avoid contracting the virus. Countries have since placed their citizens on nation wide lock down as another measure to help curb the spread of the virus. Social distancing and wearing of face mask is mandatory when you are outside your home. Isolation centres have been erected to help test and quarantine those tested positive of the virus. Inter state travelling, including international travelling have been placed on hold. Lastly, hospitals have been well equipped by the government to help combat this deadly virus.

The Virus has rapidly spread from country to country. Countries like America, Italy, Spain and the United Kingdom have been hit the hardest with death toll recorded in thousands on a daily basis.

African countries have not been spared by this virus. Leaving over forty countries with confirmed cases. Nigeria the Giant of Africa with 9791 confirmed cases, 10% discharged and 169 persons confirmed dead. Lagos one of Nigeria's largest state has the most confirmed cases among the 34 states with confirmed cases. The index case was confirmed on the 9th of February, 2019 by the Federal Ministry of Health.

The Ebola virus has affected the local life of the Nigerian citizen due to the lock down put in place by the government, that by leading to increase crime rate. Trading is the primary source of income and livelihood of an average Nigerian. Hunger and starvation have driven Nigerians to crime and other dubious means of making ends meet. Schools have been closed leaving students in a continuous state of unemployment. Churches and Mosques have closed by the government causing an uproar among the citizens.

In conclusion, Corona virus is a deadly virus with a huge mortality rate and increased adverse effect on country's economy and citizens on a daily basis. Adhering to the different measures in place is the most safest way to avoid contracting the virus.
