Test

Invited by the president of Nigeria to make an argument for optimization of engineering resources

1. Firstly the president should have the work supervised by a skilled engineer to know what the work entailed
2. The resources / material should be gotten by an engineer , so as to determine the right amount to be used .therefor reduce the cost and build to the right standard not to break any rules and regulation
3. Budget . a budget should be made by an engineer to give an insite to the president of what it would take and how to make it available to make a fast completion ,
