CLASS TEST

Economists, engineering managers, project managers, and indeed any person involved in decision making must be able to analyze the financial outcome of his or her decision. Juxtapose this statements in three sentences

1. Every person involved in the decision making of an engineering project has to consider the weight imposed on the finances by their decisions. For instance, the project managers have to know the right choice of material needed to complete the project. The material must be economic and durable.
2. Analysis of the financial outcome could lead to being not open to spending on the project. Most times, economists seem to pull back on allocating funds for the project.
3. Lastly engineering managers and human resources also have to consider the effect of the needs of their workers as against the finances of the project. Human resources management could adversely and directly affect the finances of the project.
