Dept: Nursing

Matric number: 18/mhs02/007

Course code: Phs 212

Discuss the factors facilitating the movement Of sperm in the female reproductive tract.

- Alkaline secretion from the prostrate gland into the semen: This helps to create an alkaline environment in the acidic vagina to protect sperm in the vagina.
- Prostrate glands present in the semen and in the female reproductive tract facilitate myometrial contractions: This also helps in the movement of the sperm towards the oviduct.
- Oestrogen and oxytocin secreted in the female helps to assist myometrial contractions in order to facilitate the upward utility of sperm towards the oviduct.
- Oestrogen facilitate the production of watery mucus in the cervix during the timing of ovulation to allow easy passage of sperm.
