Bank overdraft	439,200	
Current Taxation	88,000	700,000
		1,600,000

Additional Notes: R
 Dividends during the year end 53,600

RATIO ANALYSIS FOR 2014

PROFITABILITY RATIO

Return on (long term) Capital Employed (ROCE)
 $ROCE = \frac{\text{Profit before interest and tax}}{\text{Capital employed}} \times 100 = \left(\frac{220,000}{900,000} \right) \times 100\%$ 24.4%

Returns on Equity (ROE)
 $ROE = \frac{\text{Profit after taxation and preference dividend/share capital and reserves (excluding preference share capital)}}{\text{Equity}} \times 100 = \left(\frac{112,000}{700,000} \right) \times 100\%$ 16%

Operating Profit Margin (OPM)
 $OPM = \frac{\text{Profit after interest and taxation}}{\text{Revenue}} \times 100 = \left(\frac{112,000}{2,000,000} \right) \times 100\%$ 5.6%

Gross Profit Margin (GPM)
 $GPM = \frac{\text{Gross profit}}{\text{Revenue}} \times 100 = \left(\frac{500,000}{2,000,000} \right) \times 100\%$ 25%

LIQUIDITY RATIO

Current Ratio (CR)
 $CR = \frac{\text{Current Assets}}{\text{Current Liabilities}} = \frac{760,000}{700,000}$ 1.1:1

Quick/Acid Test Ratio (ATR)
 $ATR = \frac{\text{Current Asset} - \text{Inventories}}{\text{Current liabilities}} = \frac{260,000}{700,000}$ 0.4:1

WORKING CAPITAL EFFICIENCY RATIO

Average Collection Period
 $ACP = \frac{\text{Trade Receivables}}{\text{Credit Sales}} \times 365 \text{ days} = \left(\frac{200,000}{2,000,000} \right) \times 365 \text{ days}$ 36.5

Inventory Turnover Period
 $ITP = \frac{\text{Inventory}}{\text{Cost of sales}} \times 365 \text{ days} = \left(\frac{500,000}{1,500,000} \right) \times 365 \text{ days}$ 121.7

Average Payable Period
 $APP = \frac{\text{Trade Payables}}{\text{Purchases}} \times 365 \text{ days} = \left(\frac{172,800}{1,080,000} \right) \times 365 \text{ days}$ 58.4

Purchases for the year	1,080,000
Cost of Sales for the year	1,500,000
The market price of Ajanaku Plc ordinary share as 31/12/2014	4

Working Note	₦
Current asset-InVENTORY=760,000-60,000	260,000
Capital Employed(share capital+reserves+long term debt)=700,000+200,000	900,000
Gross Profit(revenue-cost of sales)=2,000,000-1,500,000	500,000

bi) liquidity ratio: Both the current ratio and acid test ratio are below the standard industry averages. This shows that Ajanaku plc is short of liquid resources thereby making it difficult to cover itself short term obligations, also it shows Ajanaku Plc is managing its working capital poorly.

ii) Profitability ratio: Ajanaku plc's return on capital employed, return on equity and gross profit margin are all significantly high. This shows that Ajanaku plc is efficient in generating profit from every unit of shareholder's equity. Looking at the gross profit margin, it indicates that Ajanaku plc is efficiently managing its cost of production and has enough money left for marketing, research and development.

iii) Working Capital ratio: The ratios appear to be good by general standards except the inventory turnover period. This means that Ajanaku plc takes too long to sell and replace inventory during that period which is very inefficient

Comparison

Liquidity ratio is low in comparison with profitability ratio, this is because Ajanaku plc doesn't have enough current asset to cover its debts even though they make profit also some part of the profit has to be kept as reserves leaving them with little or no profit. Liquidity ratio is low in comparison with the working capital efficiency ratio because Ajanaku plc is short of liquid resources which affects the working capital therefore making it impossible to make debt payments. In summary, the profit performance is strong but there are weaknesses in both the liquidity and working capital efficiency ratio. These problems need to be addressed if Ajanaku plc wants to maintain its record of strong and consistent growth.
