Math 104 Assignment

1. $\int \sin^6 x dx$

$$= \int (\sin^2 x)^3 dx$$

$$= \int (1 - \cos^2 x)^3 dx$$

$$= \int (1 - \cos^2 x)(1 - 2\cos^2 x + \cos^4 x) dx$$

$$= \int (1 - 3\cos^2 x + \cos^4 x - \cos^6 x) dx$$

$$= \int 1 - 3 \int \cos^2 x + \int \cos^4 x - \int \cos^6 x$$

$$= x - \cancel{3} \left(\frac{\cos^3 x}{\cancel{3}} \right) + \frac{\cos^5 x}{5} - \frac{\cos^7 x}{7}$$

$$= x - \cos^3 x + \frac{\cos^5 x}{5} - \frac{\cos^7 x}{7}$$

2. $\int \cos^4 x \sin^3 x dx$

Let $u = \cos x$

$$\frac{du}{dx} = -\sin x$$

$$dx = \frac{-du}{\sin x}$$

$$\therefore \int \cos^4 x \sin^3 x dx$$

$$= \int u^4 \sin^3 x \cdot \frac{-du}{\sin x}$$

$$= \int u^4 \sin^2 x \cdot -du$$

$$= -\int u^4 \cdot (1 - \cos^2 x) du$$

$$= -\int u^4 (1 - u^2) du$$

$$= -\int u^4 - u^6 du$$

$$= -\left(\frac{u^5}{5} - \frac{u^7}{7}\right)$$

$$= -\frac{\cos^5 x}{5} + \frac{\cos^7 x}{7}$$

$$= \frac{\cos^7 x}{7} - \frac{\cos^5 x}{5}$$

$$\int \cos x \sin^3 x dx$$

$$u = \cos x$$

$$\frac{du}{dx} = -\sin x$$

$$dx = \frac{-du}{\sin x}$$

$$\sin x$$

$$\therefore \int \cos x \sin^3 x dx$$

$$= \int \cos x \sin^3 x \cdot \frac{-du}{\sin x}$$

$$= - \int u \sin^2 x \, du$$

$$= - \int u (1 - \cos^2 x) \, du$$

$$= - \int u (1 - u^2) \, du$$

$$= - \int u - u^3 \, du$$

$$= - \left(\frac{u^2}{2} - \frac{u^4}{4} \right)$$

$$= - \frac{u^2}{2} + \frac{u^4}{4}$$

$$= \frac{\cos^4 x}{4} - \frac{\cos^2 x}{2}$$
