MATHS 104 Assignment

Integrate the following function

1) $\sin^6 x$

$$\frac{dy}{dx} (\sin x^6)$$

Use differentiation rules

$$\frac{d}{dx} (\sin x \times \frac{dy}{dx} x^6)$$

Calculate the derivatives

$$\cos(x) \times 6x^5$$

Substitute back

$$\cos(x^6) \times 6x^5$$

Reorder the terms

$$6x^5 \times \cos x^6$$

$$2) \cos^4 x \sin^3 x$$

$$\frac{dy}{dx} \cos^4 x \sin^3 x$$

Use differentiation rules

$$\frac{dy}{dx} \cos^4 x \times \sin^3 x + \cos^4 x \times \frac{dy}{dx} \sin^3 x$$

Calculate the derivatives

$$- \sin^4 x \times 4x^3 \times \sin x^3 + \cos^4 x \times \cos^3 x \times 3x^2$$

simplify the expression

$$- 4x^3 \times \sin^4 x \sin^3 x + 3x^2 \times \cos^4 x \cos^3 x$$

$$3) \cos x \sin^3 x$$

$$\frac{dy}{dx} (\cos x \sin^3 x)$$

Use differentiation rules

$$\frac{dy}{dx} (\cos x \times \sin^3 x + \cos x \times \frac{dy}{dx} \sin^3 x)$$

Calculate the derivatives

$$- \sin x \sin^3 x + \cos x \cos^3 x \times 3x^2$$

Reorder the terms

$$- \sin x \sin^3 x + 3x^2 \times \cos x \cos^3 x$$
