

31-05-20

Name: Ideogun Oluwanifemi Aleria.

Matric No: 191701501/036.

Department: 176BS.

College: MHS.

Course code: Maths 104.

1) Integrate $\sin^6 x$

$$\Rightarrow \int \sin^6 x \, dx$$

$$= \int (\sin^2 x)^3 \, dx$$

$$= \int (1 - \cos^2 x)^3 \, dx$$

$$= \int (1 - \cos^2 x)(1 - 2\cos^2 x + \cos^4 x) \, dx$$

$$= \int (1 - 3\cos^2 x + \cos^4 x - \cos^6 x) \, dx$$

$$= \int 1 - 3 \int \cos^2 x + \int \cos^4 x - \int \cos^6 x$$

$$= x - 3 \left(\frac{\cos^3 x}{3} \right) + \frac{\cos^5 x}{5} - \frac{\cos^7 x}{7}$$

$$= x - \cos^3 x + \frac{\cos^5 x}{5} - \frac{\cos^7 x}{7}$$

$$2) \int \cos^4 x \sin^3 x$$

$$\Rightarrow \int \cos^4 x \sin^3 x \, dx$$

$$\text{let } u = \cos x$$

$$\frac{du}{dx} = -\sin x$$

$$dx = -\frac{du}{\sin x}$$

$$\therefore \int \cos^4 x \sin^3 x \, dx$$

$$= \int u^4 \sin^3 x - \frac{du}{\sin x}$$

$$= \int u^4 \sin^2 x - dx$$

$$= \int u^4 (1 - \cos^2 x) \, du$$

$$= \int u^4 (1 - u^2) \, du$$

$$= \int (u^4 - u^6) \, du$$

$$= - \left(\frac{u^5}{5} - \frac{u^7}{7} \right)$$

$$= - \frac{\cos^5 x}{5} + \frac{\cos^7 x}{7}$$

$$= \frac{\cos^7 x}{7} - \frac{\cos^5 x}{5}$$

$$3) \int \cos x \sin^3 x dx$$

$$u = \cos x$$

$$\frac{du}{dx} = -\sin x$$

$$dx = \frac{-du}{\sin x}$$

$$\therefore \int \cos x \sin^3 x dx$$

$$= \int \cos x \sin^3 x \cdot \frac{-du}{\sin x}$$

Since

$$= \int u \sin^2 x du$$

$$= \int u (1 - \cos^2 x) du$$

$$= \int u (1 - u^2) du$$

$$= \int u - u^3 du$$

$$= \left(\frac{u^2}{2} - \frac{u^4}{4} \right)$$

$$= \frac{u^2}{2} - \frac{u^4}{4}$$

$$= \frac{\cos^2 x}{2} - \frac{\cos^4 x}{4}$$
