Course title: laboratory

instrumentation and technique

Describe how you can maintain system analyzers in ABUAD multi system hospital and keep them in good condition

An automatic system analyzer is a medical laboratory equipment that is used to measure different chemicals and other characteristics in a number of biological samples quickly with minimal human assistance. This system analyzer can be maintained by;

1. A predictive maintenance for newer high tech devices should be introduced by applying maintenance time schedules created according to the manufacturers recommendations.
2. Fully clean each and every component of the automatic analyzer
3. Daily calibration of the machine

is required

4. If any part shows wear and tear consider replacing that part.
