

NAME : EZEOBIDI CLEMENTINA ONYINYECHUKWU

MATRIC NUMBER : 17/ENG04/027

DEPARTMENT: ELECTRICAL AND ELECTRONICS ENGINEERING

COURSE: ENGINEERING LAW AND MANAGERIAL ECONOMICS (ENG384)

Short test 2

The issues of Nigerian legal systems includes

1. Judicial Corruption
2. Delays in the justice system
3. Potential inequality etc

Explanation

1. Judicial corruption: judicial corruption is any inappropriate influence on the impartiality of the judicial process by any actor within the court system.

The fact that Nigeria has a number of corrupt judges is common knowledge in the country. Over the years, there have been various allegations of corruption in the judiciary. In 2013, two High Court judges were suspended and recommended for retirement by the National Judicial Council for misconduct bordering on corruption.

And as such when problems arising from contracts dealing with engineers which could be based on poor standard of roads, Insufficient electrical equipment or substandard electrical transmission equipment can result to inappropriate judgement given hence reducing the public confidence in the country's justice system and as a result diminishing the loyal and services rendered by the engineering industry.

2. Delay in the justice system:

This affects the engineering industry greatly as the case will be left pending for months /years and during such periods the engineering industries involved will not be able to work or render their engineering services according to the COREN standards hence leading to massive unemployment in the engineering filed.

3. Potential inequality

There's inequality based on the way the cases involving engineering industry are being handled among other occupations such as the banking sector, political sector and the health

sector as well. And due to such inequality it discourages the future generations to dream and work towards being engineers which destroys the future dream of the engineering industry
