

1. As we all know, Engineering jobs are mostly based on contracts and contracts can't be complete without the legal steps. This makes the legal system a crucial member with a crucial role to play in the engineering industries. Once the legal system is corrupt, all contracts or most contracts would be underachieved or most of the time not achieved.

2. Engineering equipments produced can be of low quality most times just because the companies want to be making quick profit. When these equipments or materials are used, they can endanger the health and lives of the people using them. If there was a working legal system, they'll be fear of producing these materials only to get sued and end up in jail. But there isn't a working legal system so therefore this thing goes on and is seen as common
