

BENSON GABRIEL 17/ENG/02/015 COMPUTER ENGINEERING

1. THE NEGLECT OF INDEPENDENCE OF THE JUDICIARY:

The judicial arm of government in the legal system should not be subjected to improper influence by other arms of government, private individuals or partisan interests in order to dispense justice without fear, favour or bias, which affects the engineering industries by which judiciary officials make poor and scarce decisions when dealing with engineering facilities to be enforced.

2. DEFIANCE TO THE CONSTITUTION AND COURT ORDERS

Wills of the constitution the essence of this is to promote equality, justice and democracy. Nonetheless, the culture of non-compliance with the provision of the constitution is now an endemic disease. However, compliance with the orders emanating from this legal institution has become a challenge in the country, and is presently affecting the engineering industries in which orders have become poorly made and enforced in due time.

3. INADEQUATE MECHANISM OF LAWYERS

Poorly adequate lawyers could be implemented to take a task which may involve some engineering background into which may lead to the betterment of the environment but because of the poor legal skills in which some lawyers of this country possess, poor decisions would be made and poor orders would be enforced which lead to an inadequate engineering operation to be carried out smoothly by an engineering industry.
