SNAP TEST TWO

2.

A force majeure is an undesired occurrence that frees both parties under a contract or agreement. The following have to apply.

- the event was beyond the party's control;
- the event has prevented, hindered or delayed your performance of the contract; and
- the party has taken all reasonable steps to avoid or mitigate its consequences.

Here are two scenarios where the force major applies in Mechatronics Engineering;

1. Corona Virus (COVID-19) pandemic (Viruses):Quarantine conditions have caused a lot of contracts offered to mechatronic engineers to be under the Force Majeure clause.

2. Natural Disasters: Conditions like this cannot be foreseen and therefore can lead to application of Force Majeure clause.
