

IGOMU ENE MICHELLE

17/ENG01/013

CHEMICAL ENGINEERING

ENGINEERING LAW & MANAGERIAL ECONOMICS

22<sup>ND</sup> JUNE TEST 1

This lockdown period was unplanned and so at the beginning, I was quite skeptical about it but I had to adjust to the situation. During the first 2 weeks, I didn't really do much except to go over my notes from school, thinking we would be called back sooner to complete the exams. But as the days went by, it became clearer that this was going to extend longer than anticipated so I decide to do more meaningful things.

Aside from the regular online classes and test we had, I enrolled myself in Nanotechnology training class for college students at the Florida Institute of technology. It was really interesting and I also connected with well learned professors and interacted with other students like stuck at home around the world.

I also decide to do a bit more research on how Engineering as a profession could limit the amount damage caused but the pandemic. There was a workshop that I learnt of online, about this topic in one of the leading research companies in U.S.A. So I decide to take part in that also. It was educating and interactive.

My mum along the way also though I needed more of hand skills rather than intelligence skills. So she enrolled me at a cooking school near my house. But this was after the lockdown eased a bit in Lagos. I went there 4 days a week and I must say that I've achieved a lot both intellectually and manually in these three months than I have in a long time.

In a way this lockdown was kind of an opportunity and I made sure to take full advantage of it.
