

Name: ADENIYI TOHEEB OPE

Department: COMPUTER ENGINEERING

Matric No: 17/ENG02/006

Two scenarios where force majeure clauses can be applicable to contract.

As a computer Engineer,

Force majeure can't *deeply* affect a contract given to us unless a natural disaster like Death, stroke or illness at all occurs to the contractor.

Speaking further, from the definition and explanation given above for force majeure.

A computer Engineer can face little challenges while handling a contract which are under the coat of 'Force Majeure'

For Instance(Scenerios):

I) A Computer Engineer who has signed a contract with the clause of Force Majeure doesn't have to be bothered even after he has drafted his invoice. Because at this point, important things like connecting cables, a network hub and few other things could hinder he/she from working on a networking contract If not enough as speculated in the invoice and can also be regarded as Force Majeure when the contractor had budgeted and couldn't meet up with the demand at that point.

II) And so a worldwide blackout for computer engineering, we can't work without electricity. So in all of our mean of work, we need electricity. And even death of skilled individuals in the contract team can also be an issue.
