COURSE TITLE: COMMUNICATION IN ENGLISH

THE CORONAVIRUS PANDEMIC AND ITS EFFECT ON MODERN DAY SOCIETY

It's not a new thing to any Nigerian or anyone in the world that has seen how everything has drastically changed and the effect it has on the lives of people due to the corona virus pandemic. People now work from home, students can no longer go to school and will now have to take up online classes in order to continue their studying and education. Hospitals are filled up with patients that have shown symptoms of the virus, people have lost their jobs, the prices of things in the market have gone up. In general, things are getting harder for people financially, physically and also mentally.

Looking at all the problems that one pandemic has caused and how things are not really getting better and the date for when all of this would be over is not certain and one can only wait and hope that everything gets better.

Analyzing the problem, we can say that the Nigerian government is trying their best to make things better for the society we live in, provision of PPE [People protective equipment] has been distributed to all health care centers that have patients that have the corona virus, face masks and hand sanitizers have been made available in many retail stores so that people can easily buy it and use to protect themselves and also keep themselves free from contact with the virus. There has also been lockdown declared in so many states, and states that are not experiencing the lockdown have declared curfews to prevent people from staying outside for too long, this will not only help to flatten the curve but also help in making things better in the future.

But even with all these life is still hard for a lot of people and it's not easy to

cope with everything that has been happening, some families are going hungry, some families can't afford their houses anymore and with the state of unemployment of some citizens, we can all say that this pandemic has done more harm than good to a lot of people and it is making life hard for so many people. This is a problem that needs to be solved for the betterment of the society.

The search for vaccines and treatment is the only hope we have for everything to go back to normal and till that is found there is nothing we can do for now. Soon everything will go back to normal and this would all be over but that doesn't change the fact that this pandemic has made a great change on the lives of so many people.

I hope our society goes back to normal and people start to live comfortably again.
