Assignment

URINALYSIS: This is the process of analyzing urine for target parameters of health and diseases. It is an array of tests performed on urine and it is one of the most common methods of medical diagnosis.

The target parameters that are measured that are measured in urinalysis include:

- D- Deposit
- O- Odour (Odourless)
- R- Reaction
- C- Colour (Amber)
- A- Amount (800ml-2000ml per day)
- S- Specific gravity (1.010-1.025)
- A- Abnormality

Test involved in urinalysis

- Test strip urinalysis
