

- 1) Defining the objectives - that means identifying the objectives of any planning of urban area or identifying traffic survey, climate, resources.
- 2) Studies & surveys - by studying and surveying the plan preparation which means identifying the growth (physical, economical, social, cultural)
- 3) Analysis of data and presentation of study area - means the data gather from studies & surveys are analyzed and conclusions are concluded
- 4) Use-casting - a period of demographic projection which are described.
- 5) Design - is an important aspect in the planning process where the preparation of development plan are designed, location of zones, allocation to the existing zoning regulations etc
- 6) Feasibility studies - this is what you know financial and administrative difficulties.
- 7) Implementation - is the most important stage where all the earlier efforts to prepare plan is to be put into the practice to achieve the objectives.
